```

Question-2

Create a docker file for the jobportal application and deploy it in Docker desktop application.

```
# init a base image (Alpine is small Linux distro)
FROM python:3.10.8-alpine
# update pip to minimize dependency errors
RUN pip install --upgrade pip #
define the present working directory
WORKDIR /hello1
# copy the contents into the working dir
ADD . /hello1
# run pip to install the dependencies of the flask app
RUN pip install -r requirements.txt
```

```
# define the command to start the container
CMD ["python", "app.py"]
```

(venv) PS C:\Users\Pavan\PycharmProjects\hello1> docker image build -t hello1 .

Question -3

Create a IBM container registry and deploy helloworld app or jobportalap

```
C:\Users\Pavan>docker tag pavan123/hello1 jp.icr.io/pavan123/hello-world: hello
```

```
C:\Users\Pavan>docker push jp.ier.io/pavan123/hello-world:hello
```

The push refers to repository [jp.icr.io/pavan/hello-world]
